A: This question was closed as a duplicate of the question "Is there a site where I can download the ISO file of Windows 8.1?". The second question asks if the link to the ISO is broken, which is clearly not the case. Why does it appear that your post is a duplicate of this? 1. Field of the Invention The present invention relates to an improvement in a data transfer system between a host unit and a terminal unit. 2. Related Art of the Invention Conventionally, there is known a data transfer system of the kind as described in, for example, U.S. Pat. No. 4,765,521 in which one of a plurality of terminal units is arranged to receive data from the host unit and other units are arranged to receive data from the terminal unit which has received data. In this system, a plurality of devices are connected to the host unit by data transmission paths arranged according to the number of the terminal units, and the terminal unit which has received data accesses a designated one of the devices by an access control according to the address transmitted from the host unit. In the data transfer system described in the above U.S. patent, only one terminal unit is provided with a receive data counter. The terminal unit is arranged to receive data with the access control. Therefore, it is difficult to control the access to a plurality of devices by a one terminal unit. In addition, if a plurality of terminal units are arranged, it is required to provide a line for giving the identification of the terminal unit which has received the data to the host unit and provide another line for the access control. Therefore, the lines for the data transfer are increased and therefore the system becomes complex.
